Patent No. 569824
GENERAL INFOHMATION:
GENERAL INFOHMATION:
GENERAL INFOHMATION:
REPLICANT: Riapper: David G.
APPLICANT: Rafnar, Thorum
APPLICANT: Roo. Mei-chang
TITLE OF INVENTION: Allergenic Proteins From Ragweed and Uses
NUMBER OF SEQUENCES:
ADDRESSEE LAHIVE & COCKFIELD
STREET: 60 State Street, Suite 510
                   APPLICANT: Roders, Bruce
APPLICANT: Klapper, David G.
APPLICANT: Rainar, Thorum
APPLICANT: Kuo, Mai-chana
IIILE OF INVENTIVE: Allergenic Proteins From Rayweed and Uses
NUMBER OF SEQUENCES: 93
                                                                                                                                                                                                                                                                    COUNTRY: USA

DISSUE SPECIFICITY: PREDOMINANTLY FOUND IN THE PISITL WHERE IT FOUND IN THE OOTER FIVE LAYERS OF THE STRANDS OF TRANSMITTING TISSUE WITHIN THE UPPER TWO THIRDS OF IHE STYLE. FOUND AT WCHLOWER LEVELS IN THE ANTHERS AND VEGETATIVE ORGANS. PREVIOUS STATES STATE: MAXIMUM LEVELS ARE FOUND DURING ANTHESIS. SIMILARITY: 54% IDENTICAL TO TOWARD PROTEINS PS9 (AC PIS72).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDINE: 92313060.

ΡŢ	Peptide immuno:therapeutic agent to treat alleraid diseases :
ΡŢ	contains multi-epitope peptide containing I cell epitope regions
ΡŢ	from different allergens
PS	Claim 6; Page 32; 58pp; Japanese.
S	The present sequence represents a nulti-opitope peptide which is used as
ပ္ပ	a new immunotherapeutic agent. It comprises I cell epitupe reduces from 2
S	or more different allergens (preferably linked via arquinge or lysine
ö	dimers), where the I ceil epitope regions: have a positivity index
8	greater than 100 as measured in a patient group responding to the
DO O	allergen: have at least 70% reactivity with lymphocytes from pathenns
Ö	responding to the allergen; and are not reactive with immunoulobulin E
ပ္ပ	(IgE) antibodies from patients responsive to the alleraem The agent can
ပ္ပ	be used to prevent and treat a wide variety of allergic diseases, e.g. Ly
ပ္ပ	desensitisation. Side effects, e.g. those mediated by IOE, are reduned.

The sequence is that of an isolated poptide of the datanese redained leadernee of the feptide of 1:20 can be used for the treatment and diagnosis of allerates assertated with Japanese redai polien. It has enhanced therapeutic proportions but induced side effects compared to naturally occurring alleraness Sequence. 20 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Modified Cryptomeria japonica (Cry ) I peptide(s) - useful for treating allergy to japanese cedar pollen allergen or faminations reactive allergens. Discussionally constructed (Gpp: English Novel peptides of cry ) I have been modified as a part of a preformalization scheme to develop an optimised drug product for therapeutic treatment of humans suffering from allergy to Japanese codar pollen allergen or an allergen which is immunologically cross
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cry j i Japanese Ceda: pólico allergen peptide fragment (GJI-8).

A linked T cell epitope peptide cosed for the freather of such politics.

Such pollinosis

Ciaim 7: Page 18: 21pp; Uapa cse.

M60339-58 represent epitope. For T cells, derived from the such alection proteins Cryl (M80339-44, Ne 550-54 and W80355-59) and Cryl. (M90345-45 and W80354-55). The peptides are useful too the treather. of such pollinosis, an allergi reartion of the body to polling.
                                                                                                                                                                                                                                                           7.
Claim 4; Page 28: 36pp; Eng. 1...
Synthetic peptides based on positions of cedar pollen accessors A f815.65; and 5 (861587) were cested for their ability, positionary cedar allergenespectation feed for their ability, positional antibodies. Begindes 188.6 ** 8815.6 ** were dominional accessors. These peptides, plus subsequences (Reiffles) resolutions for freeling cognition, and homologous peptides (Reiffles) resolution and homologous peptides (Reiffles) resolutional politicosis, avoid any identification of prevent or prevent orbits. Sequence 17 AA:
                                                                                                                                                                                                                                                                                                                                                                                                         WeC346 standard; peptide: 18 AA.
WeC346.
H1-JAN-1999 (first entry.
Sudi alleraen protein Cry52 derived epitope to: 1 cells
Sudi epitope: Sudi alleraen proteins Cry34 (1992 - testen).
Sugi-politinosis: allerate reaction; politen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1.2
